EMPATHIZE & DISCOVER

EMPATHY MAP CANVAS

Metro Ticket Generating System

Date	16 October 2026	**Project Name**	Metro Ticket Generating System

Purpose

An empathy map helps the project team understand the needs, behaviours, concerns, and expectations of a metro passenger when obtaining a ticket. The points below are a project-focused draft based on the project title and the supplied empathy-map reference.

SAYS

- “I need to get my ticket quickly.”
- “I want to know the correct fare and destination.”
- “The ticketing steps should be easy to understand.”

THINKS

- Will I choose the right destination and ticket?
- How long will it take to get a ticket during busy hours?
- I hope the process is clear and reliable.

DOES

- Checks the destination before purchasing a ticket.
- Looks for ticketing instructions or asks for help when unsure.
- Completes the ticket-purchase steps and checks the ticket.

FEELS

- In a hurry when the station is crowded.
- Confident when the steps and fare are clear.
- Frustrated if the process is confusing or takes too long.

PAINS & GAINS

PAINS

- Long queues or delays when buying a ticket.
- Unclear fare, destination, or purchase instructions.
- Difficulty completing the process without assistance.

GAINS

- A simple, clear ticket-purchase process.
- Easy-to-understand destination and fare information.
- Less waiting and greater confidence while travelling.

Design Focus

The Metro Ticket Generating System should aim to make ticket purchase straightforward, help passengers identify the correct destination and fare, and reduce avoidable confusion and waiting. These are empathy-map observations to guide discussion, not confirmed system requirements.

Note: The supplied reference document contains the empathy-map explanation and a food-ordering example, but it does not include detailed Metro Ticket Generating System requirements. This canvas therefore uses reasonable passenger-perspective draft points based on the project name.
