Define the Problem Statements

Metro Ticket Generating System in ServiceNow

Date	16 October 2026
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement

The statements below describe passenger challenges that the project is intended to address. They are written from the customer's point of view and should match the features of the completed application.

PS-1	Customer Problem Statement
I am (Customer)	a metro passenger who needs to book a ticket for a journey
I'm trying to	enter my journey details and submit a ticket request through a clear digital process
But	booking may involve queues or several manual steps, making the process slower
Because	I may not have one convenient place to provide and review the information needed for my ticket request
Which makes me feel	inconvenienced and unsure whether booking will be quick and straightforward

PS-2	Customer Problem Statement
I am (Customer)	a passenger who wants to understand and keep track of my ticket request
I'm trying to	provide accurate journey information and review the resulting booking or ticket details
But	the steps for submitting a request and checking its outcome may not be clearly organized
Because	ticket information can be difficult to follow when the process relies on separate or manual steps
Which makes me feel	frustrated and less confident about managing my metro ticket request

Project Focus

The Metro Ticket Generating System in ServiceNow aims to provide a structured digital process for submitting metro ticket requests and organizing the resulting booking information. The final description should reflect only functions implemented and tested in the application.

Format based on the college template: Problem / Customer / Trying to / But / Because / Which makes me feel.
