USER ACCEPTANCE TESTING (UAT)

Metro Ticket Generating System in ServiceNow

Date	16 October 2026	**Maximum Marks**	As specified by project guide

1. Project Overview

Project Name: Metro Ticket Generating System in ServiceNow

Project Description: A ServiceNow-based application concept for submitting metro ticket requests, validating the required information, generating a ticket record/reference, and allowing authorized staff to review and manage ticket records.

Project Version: 1.0 (initial UAT document)

Testing Period: To be confirmed by the project team before execution.

2. Testing Scope

In scope: ticket form access, required field validation, submission of valid details, ticket record creation, ticket reference/confirmation, ticket status handling, authorized staff review, and basic error handling.

User stories / requirements covered: access control, ticket form and data capture, validation, record storage, ticket generation, status tracking, user confirmation, and administrative review.

Out of scope unless implemented: online payment, live metro timetable/fare APIs, QR-code scanning, and external integrations.

3. Testing Environment

URL / Location: ServiceNow development or test instance — enter the actual instance URL before testing.

Credentials: Use authorized test accounts provided by the project administrator. Do not include passwords in this document.

Preconditions: the application and ticket form are deployed to the test instance; required roles and test data are available.

4. Test Cases

Run each test in the configured ServiceNow test instance. Record the actual result and mark Pass or Fail only after execution; the outcomes below are intentionally left as pending.

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass / Fail
TC-001	Open ticket form	1. Sign in with an authorized test account. 2. Open the ticket application/form.	The ticket form opens and is usable.	Pending	Not run
TC-002	Submit valid ticket details	1. Enter all required ticket/journey details. 2. Submit the form.	The request is accepted and a ticket record is created.	Pending	Not run
TC-003	Required-field validation	1. Leave a required field blank. 2. Submit the form.	The system identifies the missing information and prevents invalid submission.	Pending	Not run
TC-004	Invalid input handling	1. Enter invalid data in a field with validation rules. 2. Submit the form.	The system shows an appropriate validation message and does not create an invalid record.	Pending	Not run
TC-005	Ticket reference generation	1. Submit a valid ticket request. 2. Inspect the created record/confirmation.	A ticket record has a unique reference according to the configured implementation.	Pending	Not run
TC-006	User confirmation	1. Complete a valid submission. 2. Review the confirmation shown to the user.	The user sees confirmation and the ticket reference or status.	Pending	Not run
TC-007	Ticket status handling	1. Open a created ticket as an authorized user. 2. Update status if the workflow allows it.	The status is saved and reflected correctly in the record.	Pending	Not run
TC-008	Staff review and update	1. Sign in with an authorized staff/admin account. 2. Open a ticket record. 3. Review or update permitted fields.	Authorized staff can access and manage records according to assigned permissions.	Pending	Not run
TC-009	Access permissions	1. Attempt access using an account without the required role. 2. Try to view or update protected records.	Unauthorized access is restricted according to configured roles and permissions.	Pending	Not run
TC-010	Error / duplicate submission check	1. Submit a request. 2. Repeat submission or test error handling where applicable.	The application handles repeated actions and errors appropriately; no unintended duplicate is created if duplicate prevention is configured.	Pending	Not run

5. Bug Tracking

Log any issue found during testing. The example row is a blank record format; do not report a bug unless it is actually observed.

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001 / assign ID	Record the observed issue and its impact.	List the exact steps that produced the issue.	Low / Medium / High	Open / In Progress / Closed	Add notes, screenshots, or suggested improvement.
BG-002 / assign ID	Record another issue if found.	List reproduction steps.	Low / Medium / High	Open / In Progress / Closed	Add further feedback.

Severity guidance

High: blocks a core ticket workflow or exposes protected data. **Medium:** a key feature is impaired but a workaround exists. **Low:** a minor issue with limited impact.

6. Sign-off

Tester Name	_____
Date of Test Completion	_____
Tester Signature	_____
Project Manager Approval	_____
Product Owner Approval	_____

7. Notes

• Test both positive and negative scenarios and record actual outcomes after execution.

• Include detailed feedback and reproducible steps for every issue found.

• Obtain project manager and product owner sign-off before deployment, as required by the supplied template.

Document note: Test results, testing dates, instance URL, tester names, and approvals have not been supplied and therefore remain pending for the project team to complete.
